

$$G_{\text{Gaia}} = 03.50$$

HSC-G

430 arcsec

The image is a deep-field astronomical photograph in the HSC-G (Hubble Space Telescope Color) filter, showing a dense field of galaxies. A prominent, bright, yellowish-white elliptical galaxy is centered within a white circle. The background is filled with numerous smaller, fainter galaxies of various colors (blue, green, yellow, red). In the bottom left corner, a white horizontal line indicates a scale of 430 arcseconds.
