HSC-Z

430 arcsec

This is a deep-field astronomical image in the HSC-Z band, showing a galaxy cluster. The cluster's core is a bright, yellowish-white region with a complex, multi-lobed structure. Concentric, faint, yellowish-white rings or shells are visible around the core, indicating the distribution of galaxies. The background is a dark blue field densely populated with small, distant galaxies. A white circle is drawn around the cluster, and a white horizontal scale bar is located in the lower-left corner.
